**Purpose of Contact:** Waste disposition of the B993 slab

## **Discussion**

The D&D RLCR and the D&D RSOP notification for the 993 building refer to disposition of this slab as low level waste. However, the RLCR showed that the slab itself met free release criteria. The explosive bonding pit within the building slab is not accessible and a waste stream determination could not be made at the time the RLCR was completed. Because explosives were used at this location, it is agreed that the concrete will not be recycled. However, the portion of the building slab that meets the free release criteria will be sent to the sanitary landfill.

The explosive bonding pit and fill material will be evaluated when access is obtained. If filled with concrete, the pit and fill will be disposed as low-level waste. However, if a removable fill material is present, this will be sampled to determine appropriate waste disposition. The pit walls and floor will also be evaluated unless these are dispositioned as low level waste without further analyses. None of this waste will be recycled.
